

# Bread Wheat Tiger Mix

**New**

## Key strengths

Excellent adaptability  
to all environments

Very productive as FF

Suitable for  
intensification

## Sowing recommendations

Seeding rate: 201-225 kg/ha

Seeding density:  
(germinable seeds/m<sup>2</sup>) 420-470

Notes:

Suitable for all growing conditions,  
moderately sensitive to Chlortoluron

***"The mix of  
strength that  
he knows how to  
use to win every  
challenge"***

## CHARACTERISTICS

### Morpho-Physiological Traits

|                    |           |
|--------------------|-----------|
| Size               | medium    |
| Lodging resistance | excellent |
| Alternative habit  | winter    |
| Ear type           | with awns |

### Resistance to Biotic and Abiotic stress

|                      |                       |
|----------------------|-----------------------|
| Powdery mildew       | medium tolerance      |
| Brown rust           | medium susceptibility |
| Septoria             | medium tolerance      |
| Fusarium head blight | medium tolerance      |

### Qualitative Traits

|                             |                |
|-----------------------------|----------------|
| Thousand Grain Weight (TGW) | medium         |
| Hectolitre weight           | good           |
| Hardness                    | medium/hard    |
| Protein content (%)         | excellent >14% |
| Grain colour                | red            |
| W                           | > 400          |
| P/L                         | 0,4-0,6        |
