

Durum Wheat

# Gattopardo

New

## Key strengths

Excellent gluten quality

Broad cultivation  
adaptability

Perfectly tolerates  
water stress

## Sowing recommendations

Seeding rate: 206-233 kg/ha

Seeding density:  
(germinable seeds/m<sup>2</sup>) 370-420

Notes:

Also suitable for late sowing

**Sowing area**  
Central-south Italy

*"With an  
Iride mother!"*

## CHARACTERISTICS

### Morpho-Physiological Traits

|                    |        |
|--------------------|--------|
| Size               | medium |
| Lodging resistance | medium |
| Awn color          | brown  |

### Resistance to Biotic and Abiotic stress

|                      |                  |
|----------------------|------------------|
| Powdery mildew       | medium tolerance |
| Brown rust           | medium tolerance |
| Septoria             | medium tolerance |
| Head blight Fusarium | susceptible      |

### Qualitative Traits

|                             |          |
|-----------------------------|----------|
| Thousand Grain Weight (TGW) | good     |
| Hectolitre weight           | good     |
| Vitreousness                | low      |
| Protein content (%)         | low >11% |
| Gluten index                | good     |
| Semolina color intensity    | low      |
